

The **1130 ProStep VS** foot is designed with the moderate impact K3, moderate activity level lower limb amputee ambulator in mind. The 1130 ProStep Vertical Shock, providing up to 12.7mm / 0.5-inch of initial stance impact reduction travel, was designed specifically to integrate into, and enhance, the function of the progressive dual carbon fiber spring keel structure. There also is +/- 7 degrees of inversion and eversion movement of the heel and forefoot with the split Carbon keel. The additional carbon plate feature progressively compresses during stance phase, enhancing energy return, yet allows for comfort while walking. The weight limit is 125 kg / 275 lbs.
